Disdvantage

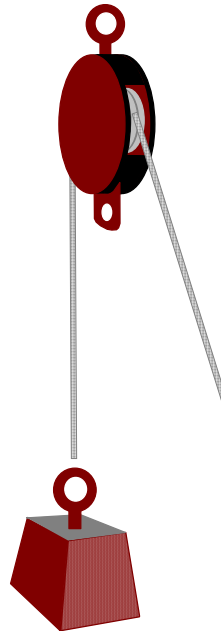

## RUNNER

This consists of a rope through a single moving block.

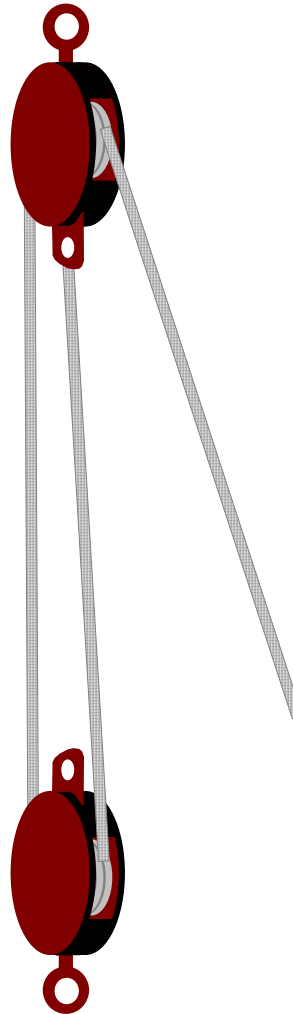

## SINGLE WHIP

This consists of a fall rope through a single standing block; no mechanical advantage is gained. It is used for hoisting light loads where speed of hoisting is important.

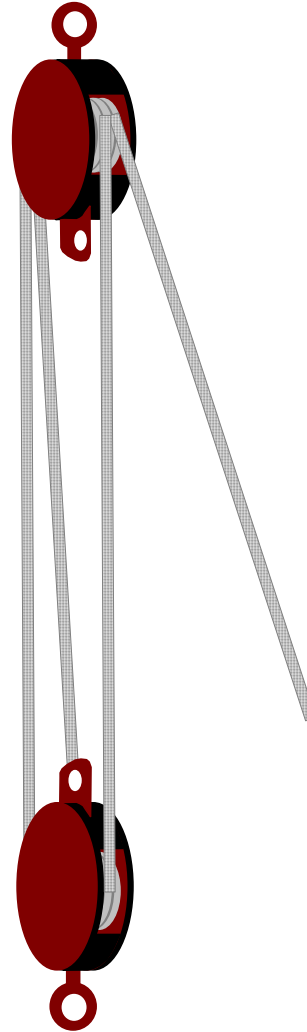

# DOUBLE WHIP

two single blocks rove with the standing part of the fall made fast near the upper block

# LUFF

a double block and a single block  
with the standing part of the fall  
made fast to the single block

# TWO FOLD PURCHASE

two double blocks and is a  
useful general purpose tackle
